

Allergy Related Products

Allergic diseases affect over a quarter of the population in industrialized countries, posing a significant public health challenge. Triggered by hypersensitivity of the immune system, allergies lead to IgE antibody production, causing inflammation and dysfunction. Common allergens include dust mites, pollen, pet dander, and certain foods. Severe cases may result in life-threatening reactions like anaphylactic shock, requiring urgent care.

abinScience provides cutting-edge allergy testing solutions, including recombinant allergen proteins and anti-IgE antibodies. Our key products, such as **Der f 1**, **Fel d 1**, and **Ara h 2**, enable precise detection and research of IgE-mediated allergic reactions, supporting effective allergy management and advancing scientific innovation.
